Project Proposal

Vision

Our vision is to provide online a combination of a calendar and a mail client. You should be able to have the same UI for your calendar and mail client with access from everywhere. It should not be required to install anything else than a web browser, so we provide the services as a website in the cloud.

The core functionalities are the calendar app and the mail client. In the calendar app you can switch between different view types like daily or weekly view and create single appointments or series. In the mail client it is possible, to sent, manage and retrieve mails. Supported retrieval technologies should be POP3 and IMAP.

You can find our blog on Coursesites.

Team Members

Andreas Haberl	andreashaberl@gmx.net	Designer, Backend Developer, System Admininstrator, Database Architect
Tobias Engelmann	tobias.engelmann@web.de	Backend Developer, Frontend Developer, Blogger
